# WHAT IS A COLOURED SMOKE TYRE

Coloured smoke is given off by using a dye mixed into the tread on the smoke tyre. The smoke is activated by intense heat, generated from the friction between a spinning tyre and the ground. The physical characteristics of the coloured tyre smoke are the same as a normal tyre smoke.

## -THE EFFECT OF COLOURED SMOKE TYRE DURING A BURNOUT-

## THE MECHANISM OF COLOURED SMOKE TYRES

## HEALTH AND SAFETY

Coloured smoke doesn't contain any harmful materials to the body, as confirmed by the industry standard Material Safety Data Sheet. However, due to chemical composition of regular smoke, inhalation and eye contact should be avoided

## SPECIAL CONDITIONS FOR SMOKE TYRE

### 1. Designed for Competition (Pad & Track) use only

- The coloured smoke tyre has been designed for competition and controlled track/pad use only
- Safe distance must be kept at all times
- Safety eye wear must be worn at all times
- Safety ear wear must be worn at all times
- Area intended for use should be cleaned and swept of any debris

### 2. Vehicle Fitment

- The effect of the colour and smoke is maximized with a higher powered engine and rear wheel drive, which is the best combination for drift and burnout application
